

# Storyboard: Fusion Revision Sorter

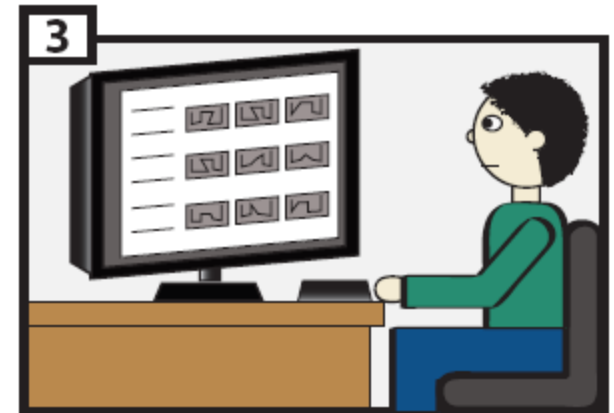

Author: Liz Rodriguez  
Version 2

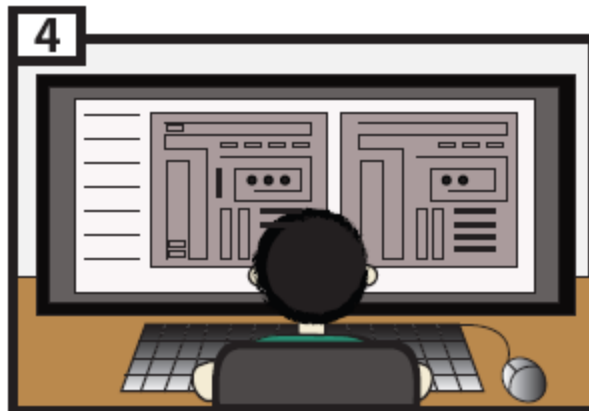

First, the plant engineer, Sam, sits at his workstation and opens the control panel. From here Sam will select the "Revision Sorter" link under the Fusion Operations tile.

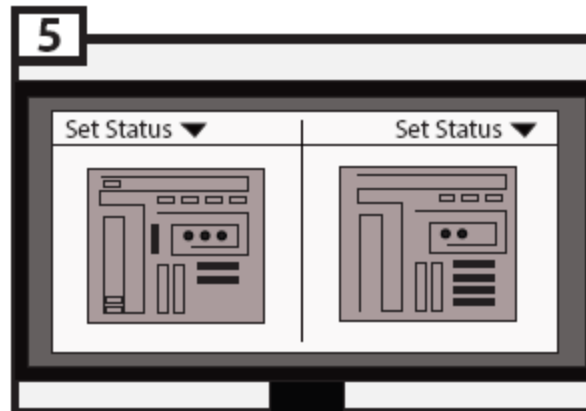

Now a To Do List will appear and display all the documents and associated files that need to be resolved. Sam will need to select a document set to start his work.

Next, Sam sends these files to the pivot viewer and views, sorts and assigns statuses to the ones that can be assessed through thumbnails.

Sam now needs a detailed view for some remaining files, so he launches the comparison view which displays additional details, bigger images and a side by side view.

Sam can take a closer look at the images and assign statuses accordingly. This step is repeated until all files within the document have been resolved and assigned a status.

At this point, Sam is ready to return to the To Do List and submit the completed list for sign off. After this, Sam can select another document to work from.
